# Data Breach Statistics And Facts

**Cybersecurity statistics show that around 95 user credentials are stolen each second**

More than 3 billion passwords and other credentials are compromised or stolen per year whether through data breaches or malware. Services like e-banking now need regular password updates. Experts suggest that people should have different passwords for each website or app.

## In 2019

**Facebook as well suffered a security breach recently**

One of the most popular social networking platforms, Facebook experienced a major security breach. This attack on Facebook made account names, comments, user IDs, and reactions publicly available. Experts found that the passwords of around 600 million FB accounts had been stored as plain text files after the security breach.

# Cybercrime Statistics 2022

- **1 out of 10 small firms experiences a cyber attack per year**

Cybersecurity statistics show that small businesses need to spend on cybersecurity, as small firms are easy targets of cyber criminals.

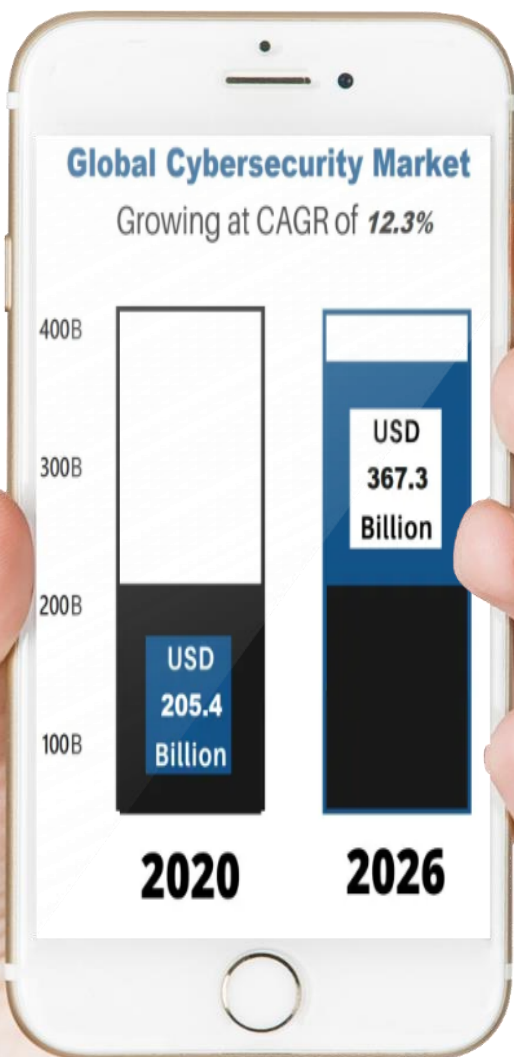

- **Every 14 seconds a ransomware attack takes place**

According to Cybersecurity Ventures, Ransomware is the most lucrative type of malware. Ransomware attacks are more prevalent now than ever.

- **Every 39 seconds a cyber attack takes place**

The latest cybersecurity statistics show that an unsecured system connected to the internet can be a target of more than 2000 cyber attacks each day. Hackers use automated tools and scripts to investigate their targets for susceptibilities.

## Global Cybersecurity Market

The worldwide cybersecurity market is estimated to reach up to \$300 billion by 2026

The value of the cybersecurity market is growing rapidly. Experts predict that it can easily grow by two or threefold in the next three years as the demand for cybersecurity services and solutions is growing.

**Hackers Make Attacks Every  
39 Seconds**

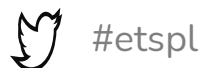

## CEO Message

Nowadays the threats of document theft and other cybercrimes have become more prevalent than ever. In such a scenario, **cybersecurity** has become a '**must-have**' tool for **internet users**.

Cybersecurity is **vital for everyone** who uses the internet; however, it is especially critical for firms and businesses that have a remote workforce. Many companies invest in antivirus software, firewalls, and cyber insurance to protect their private data and to build their defense against **cyber criminals**.

Here we will discuss some crucial cybersecurity statistics and facts that will help people avoid cyber threats and pivot their online behavior to keep their confidential data safe and secured.

# MEET OUR TEAM

We pride ourselves on our team of dedicated and talented professionals who work tirelessly to deliver the highest quality products and services to our customers. Our team is made up of experts in IT fields, with years of experience and a deep passion for what we do. From our skilled developers and designers to our friendly customer service representatives, every member of our team is committed to providing exceptional service and exceeding our customers' expectations. We believe that our success as a company is due in large part to our team's diverse backgrounds, skills, and perspectives. We value collaboration, creativity, and innovation, and strive to foster a culture of inclusivity and respect.

## FMS / AMC / NMS

FMS, AMC, and NMS are all acronyms used in the field of IT infrastructure management. All three of these services are important for ensuring the reliability and performance of IT infrastructure. FMS helps to ensure that the physical facilities supporting IT operations are properly managed and maintained, while AMC ensures that IT equipment is regularly serviced and repaired as needed. NMS helps to ensure that network devices and infrastructure are operating efficiently and that issues are quickly detected and resolved. //

1. FMS (Facilities Management Services)
2. AMC (Annual Maintenance Contract)
3. NMS (Network Management System)

## APPS DEVELOPMENT

App development solutions refer to the technologies and services used to create, design, and deploy mobile applications for various platforms such as Android, iOS, and Windows. Some common app development solutions include:

1. Cross-platform app development frameworks
2. Native app development
3. Mobile Backend as a Service (MBaaS)
4. App prototyping and design tools
5. App testing and debugging tools
6. App analytics and monitoring

# Cyber Security Experts

## The skills shortage

The cybersecurity industry has an employee and skills shortage. But don't lose heart, faithful security pros: Joseph Blankenship, a research director for security and risk at Forrester Research, suggested organizations look inward for current employees who might be well suited for security careers, and then recruit and train them for those new roles. There might be plenty of individuals out there -- such as networking admins, developers, systems engineers and even security analysts -- with the chops needed for the job.
